Most Innovative Staff of the Year, *Bountiful Technologies* 01/11/2023

Projects

Chef Jhamin's Kitchen Management System
- Built a full-stack restaurant management platform with real-time sales tracking, inventory with low-stock alerts, staff scheduling, expense tracking, customer/supplier CRM and purchase orders.
- Implemented role-based access control and a full audit trail.
- Deployed on Render with PWA support so staff can install it on mobile.

Offline-First LAN Examination System ·
- Designed a self-hosted exam platform that runs entirely without internet on a local network.
- Built a bulk-import engine for Excel/CSV student lists and question banks.
- Delivers sandboxed, secure assessments to any device on the network, with local real-time grading.

StudyBuddy – BECE Exam Prep App
- Built an offline-first PWA that explains exam vocabulary in plain language and lets students practice it.
- Covers 7 subjects, 500+ glossary terms, step-by-step learning paths, gamified quizzes and real past-paper questions (2023–2025).
- Deployed on Vercel.

Automated Student Report Generator
- Generates formatted STEM assessment report cards from Google Sheets and exports them as PDFs to Google Drive.
- Used batch processing with time-based triggers to work around the 6-minute Apps Script execution limit.
- Made it configurable for any school by swapping the logo and folder IDs in config cells. Used by 6+ schools; 1000+ reports generated.

Auto Cat – Intelligent Downloads Organizer
- Built an always-on filesystem service that waits for downloads to finish, reads PDF text to identify each file, then renames and files it automatically.
- Added rules-driven configuration, atomic safe moves, full undo and a Windows tray icon.

Assessment Downloader
- Created an automation script that downloads and organizes student assessments directly from school databases.
- Improved data accessibility and retrieval efficiency.
